SUMMARY

Computer Engineering student focused on backend systems and distributed infrastructure. Experience building production applications with Go, TypeScript, AWS, Docker, Next.js and PostgreSQL, including a distributed search engine indexing 1M+ web pages and self-hosted deployment platforms.

EDUCATION

Thadomal Shahani Engineering College

September '24 – Present

B.E - Computer Engineering - **CGPA - 9.67**

Bandra, Maharashtra

Don Bosco School and Junior College

July '12 – April '24

Higher Secondary Certificate (HSC) - **Percentage - 93.33%**

Boisar, Maharashtra

TECHNICAL SKILLS

Languages: Golang, TypeScript, JavaScript, C++

Backend & Databases: Echo, Express, PostgreSQL, MongoDB, Redis, GORM, Prisma

Cloud & Infrastructure: AWS EC2, AWS SQS, AWS RDS, AWS S3, Docker, Linux, GitHub Actions

Frontend & Tools: React, Next.js, Vue.js, Tailwind CSS, Shadcn, Git

EXPERIENCE

Saras Finance

January '26 - February '26

Software Developer Intern

Remote

- Migrated a **20k+ line production frontend codebase** from **JavaScript** to **TypeScript** single-handedly, defining reusable **types and interfaces** to enforce compile-time safety and reduce runtime errors.
- Implemented a **centralized Axios service layer** used across **40+ API endpoints** with **request/response interceptors** for HTTP-only token injection, **global error handling**, and retry logic.
- **Revamped the frontend** of a core product, refactoring **30+ UI components** to improve maintainability.

TSEC CodeCell

March '26

DevOps Lead

Bandra, India

- Spearheaded the development and deployment of the platform and execution engine for **Weekly Challenges**, a CP competition with **650+ users**.
- Designed an **asynchronous judging pipeline** using **Redis queues** and concurrent **Go workers**, decoupling code execution from the API and enabling submissions to be processed without blocking the application.
- Deployed **Dockerized services** on **AWS EC2/RDS** with CI/CD via **GitHub Actions** and **Watchtower**.

PROJECTS

Self-Hosted Production Platform [↗](#)

December 2025

Next.js — Linux (Termux) — CI/CD — Cloudflare Tunnel — PM2 — Webhooks

- **Built a self-hosted server on an old Android device** using a Linux (Termux) environment, eliminating dependency on traditional cloud infrastructure and **enabling 24/7 deployment automation**.
- **Engineered an on-device webhook-driven CI/CD pipeline** that **automatically deploys every commit from GitHub**, reducing manual deployment steps from **5 minutes to under 30 seconds**.
- [GitHub Repo](#) [Blog](#)

Distributed Search Engine [↗](#)

June 2026

Go — PostgreSQL — AWS EC2 — AWS S3 — AWS SQS — Redis

- **Built a distributed search engine** indexing 1M+ web pages in **Go** with a custom crawler, indexer, **BM25 ranking engine**, and event driven architecture powered by **Amazon SQS**.
- Designed a **disk-based inverted index and lexicon storage engine** from scratch, bypassing traditional databases for retrieval and enabling **microsecond-scale term lookups** instead of millisecond-scale.
- [GitHub Repo](#)

ACHIEVEMENTS

- **Winner** at JPMorganChase **Code for Good 2026** Mumbai Hackathon.
- **2x hackathon winner** and **3x hackathon finalist**.
- Self-hosted infrastructure project gained **5,000+ visits within 24 hours**, handling up to **100 concurrent visits at its peak**, maintaining **99% uptime** in production.
